EuroSymphony Language Tools

This package of four extensions includes spellcheckers, hyphenators and grammar checkers for several languages and a thesaurus for Hungarian. All of our tools are powered by the high quality language engines created by Morphologic.

Detailed contents of this package include:

- EuroOffice Spellchecker for English, German, French, Spanish, Italian, Polish and Hungarian.

- EuroOffice Hyphenator for English, German, Polish and Hungarian.

- EuroOffice Thesaurus for Hungarian.

- EuroOffice Grammar Checker for English, German, French, Spanish, Italian, Polish, Hungarian, Czech, Dutch, Lithuanian, Slovenian, Swedish and Ukrainian.
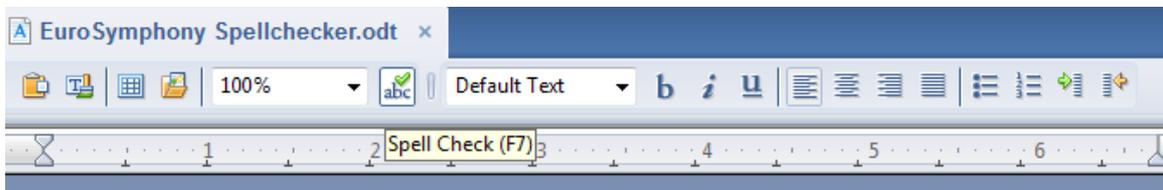

EuroSymphony Spellchecker

This extension is a very useful help in document creation. Spellchecker provides a word by word checking and marks errors with red underlines and enables you to fix them by right clicking:

You can scan the whole document once with using **Spell Check** button on **Standard toolbar** or through the **F7** key, but you can choose the dialog from **Tools** menu **Spell Check**, too.
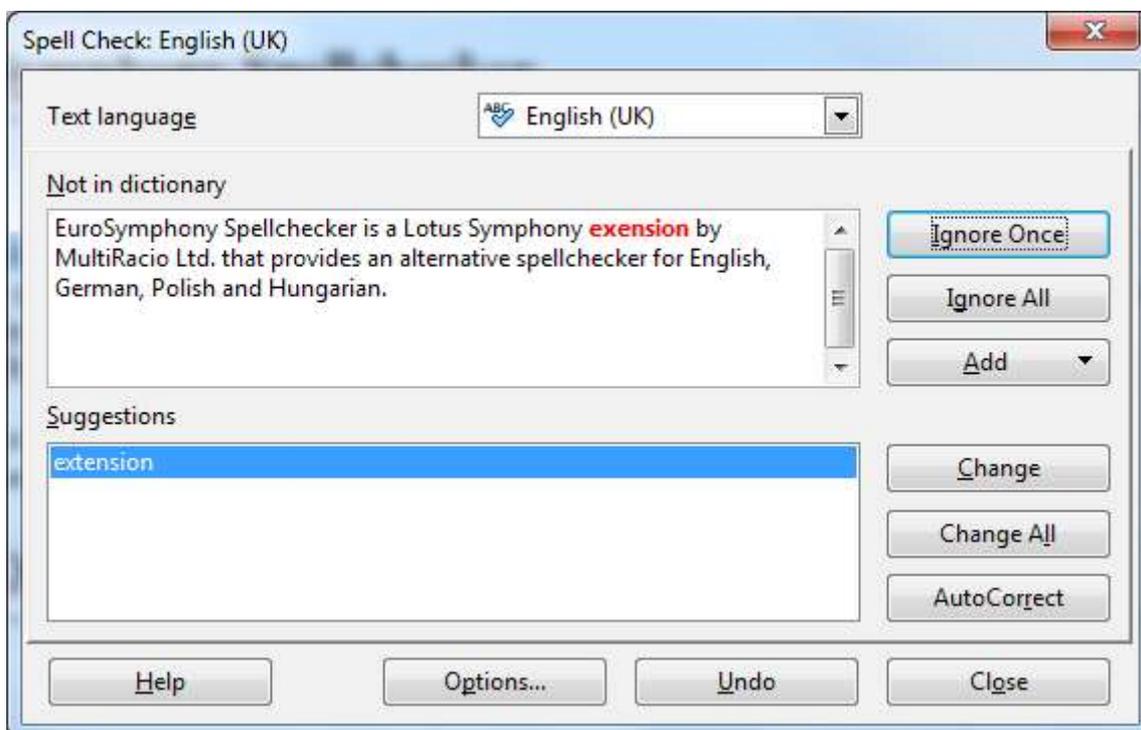

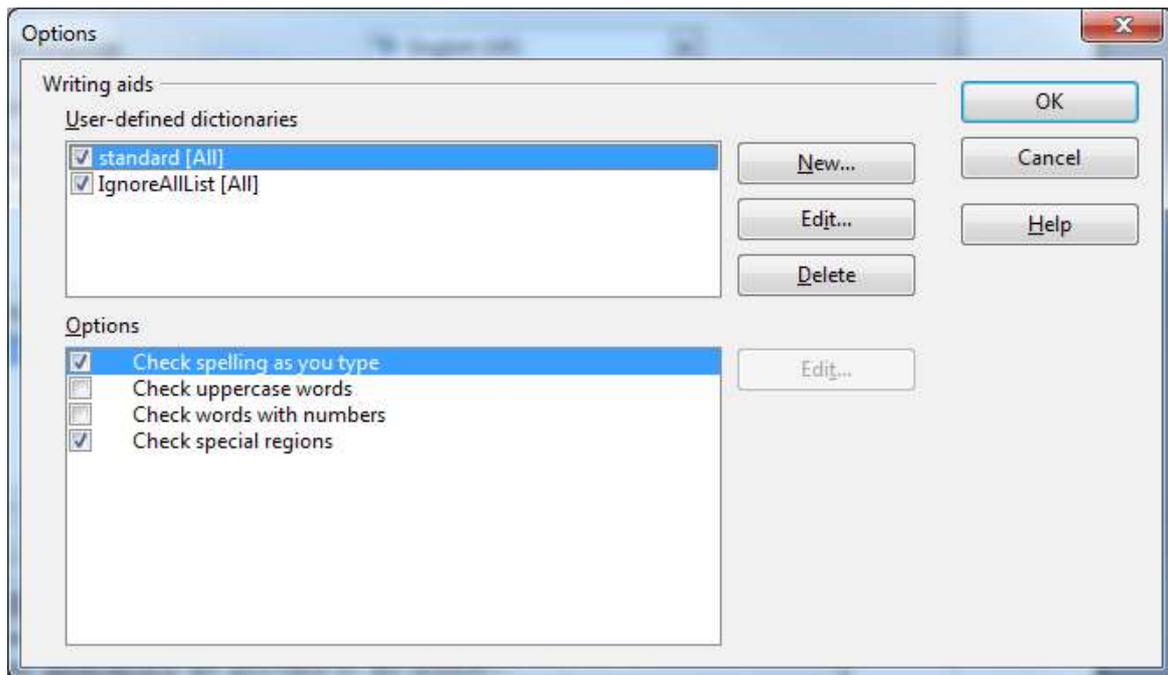

EuroSymphony Spellchecker

EuroSymphony Spellchecker is a Lotus Symphony exension by MultiRacio Ltd. that provides an alternative spellchecker for English, German, Polish and Hungarian. The database and algorithms of this spellchecker are provided by the industry-leading Morphologic Ltd.
EuroSymphony Spellchecker extension is part of EuroSymphony Language Tools package.

This extension is a very useful help in document creation. Spellchecker provides a word by word checking and marks errors with red underlines and enables you to fix them by right clicking:
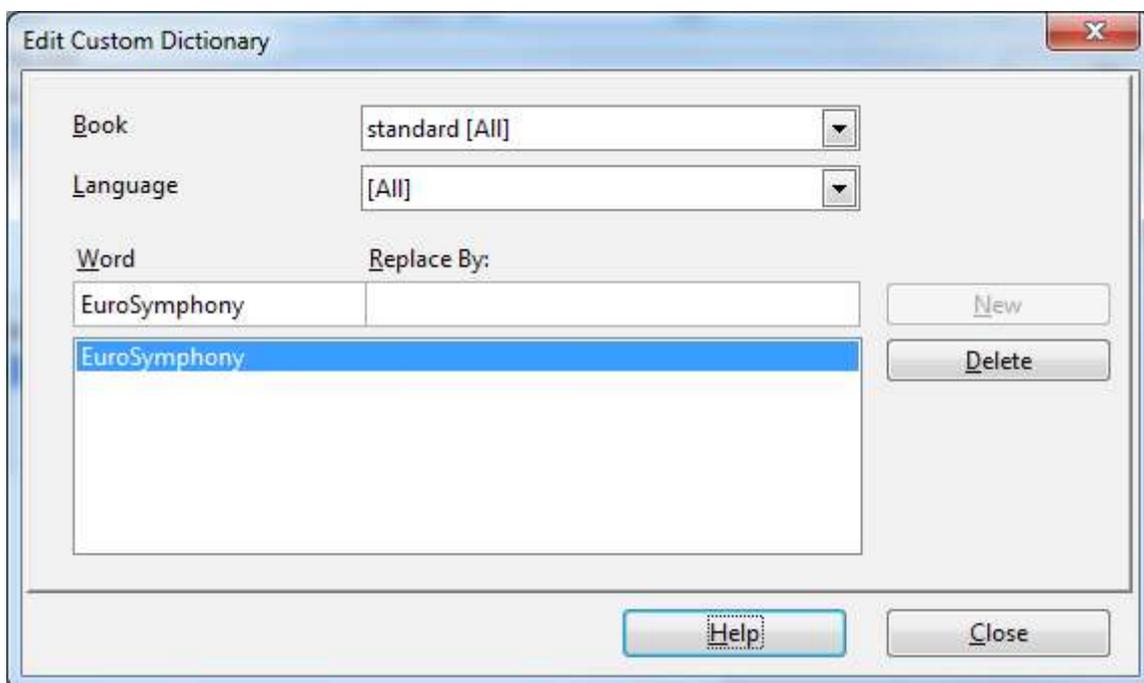

Errors and suggested alternatives are then displayed in a dialog. To accept one of the offered suggestions in the bottom box, select it and press **Change** button. If there is no any suggestions, correct the word manually and press the **Change** button. The word will be replaced with the suggestion and the process continues with next error.

Choose **Options...** to change any option of your spell checker.

You can check the available tools in every language by choosing Edit button. There is a list about user defined dictionaries. You can edit standard dictionary or IgnoreAllList dictionary, which contains ignores. You can do that in custom dictionary dialog.

EuroSymphony Grammar-checker

Grammar checker provides a whole sentence monitoring and considers grammatical errors. It marks errors with green underlines and enables you to fix them.

Online grammar checking marks grammar errors in the document with a green underline. It can be enabled or disabled using its menu item in **Tools** menu. (It is disabled by default.)

But more, much more then this. I did it my way.

The Grammar Check menu item in the Tools menu can be used to invoke the on demand grammar checking. This method can be used to scan the whole document for grammar errors. Errors and suggested alternatives are then displayed in a dialog.
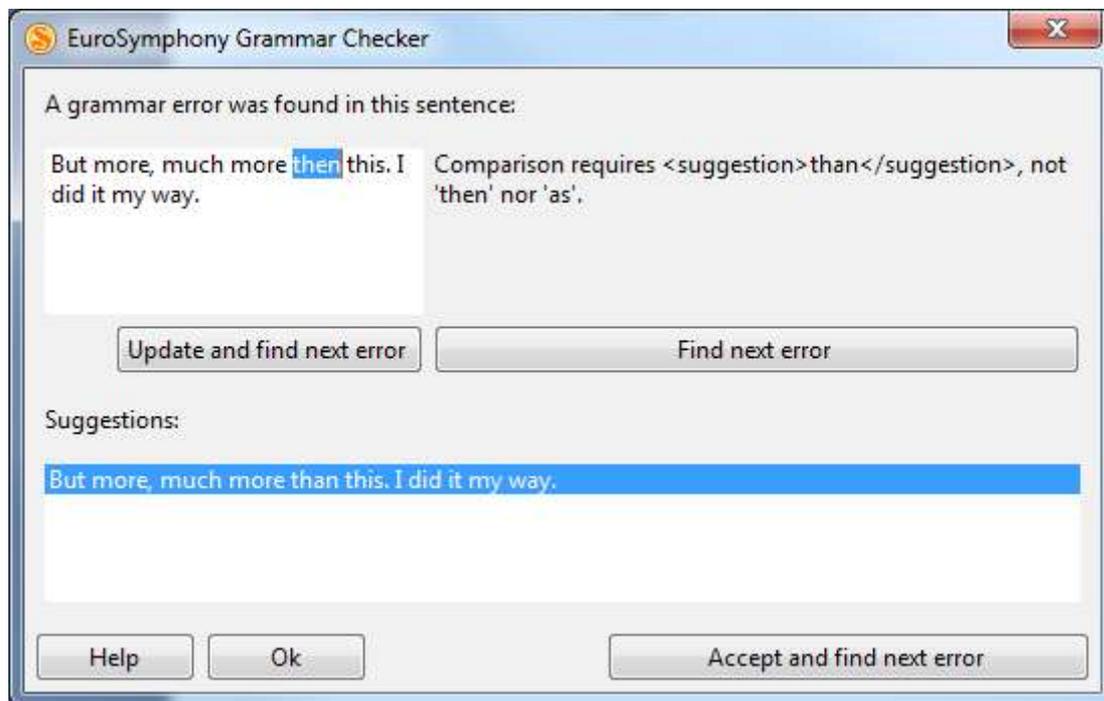

This dialog provides three options for handling the error:

You can manually correct the sentence in the top left textbox and press the Update and find next error button to change the sentence. The sentence is then checked again for further errors and if none are found, the process continues with the next sentence.
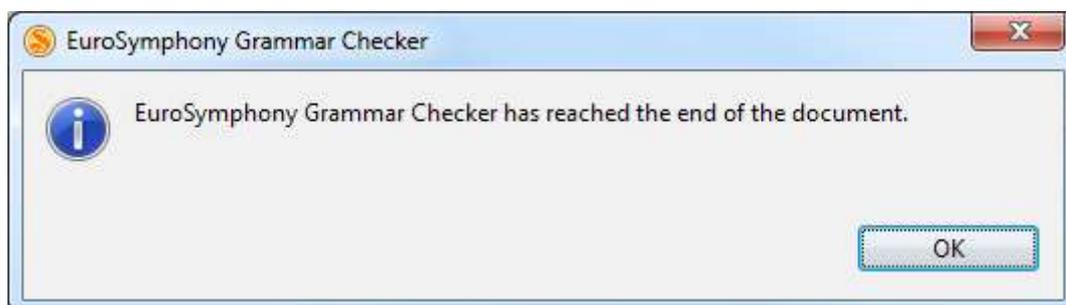

To accept one of the offered suggestions in the bottom box, select it and press Accept and find next error. The sentence will be replaced with the suggestion and the process continues.

If the sentence is actually correct, or the error is intentional, press Find next error to skip to the next error.

If the sentence contains more than one error, they will be found one at a time. This means that the suggestions themselves will also contain errors in these cases, because only one is fixed at a time. While this may appear strange (a grammar checker suggesting grammatically incorrect alternatives), one by one the errors will all be handled, so it is safe to accept these partially fixed suggestions.
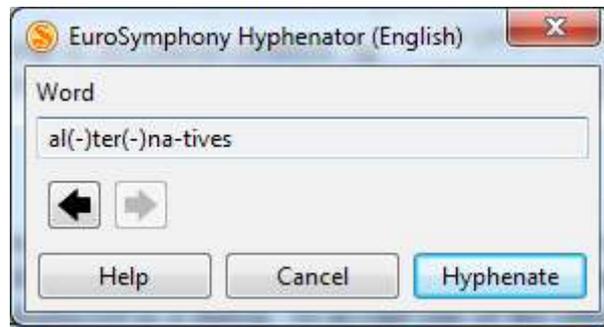

After checking the last grammar error, EuroSymphony Garmmar Checker extension inform you that the end of the document has been reached and grammar checking is finished.

EuroSymphony Hiphenator

First click on a word you want to hyphenate, then choose **Tools – Hyphenate** submenu for using this function. In the Hyphenation dialog your word appears and hyphenator module gives some suggestions for hyphenating. You can change this position with using arrow icons, or choose "Hyphenate", and a conditional separator will be inserted in that position.
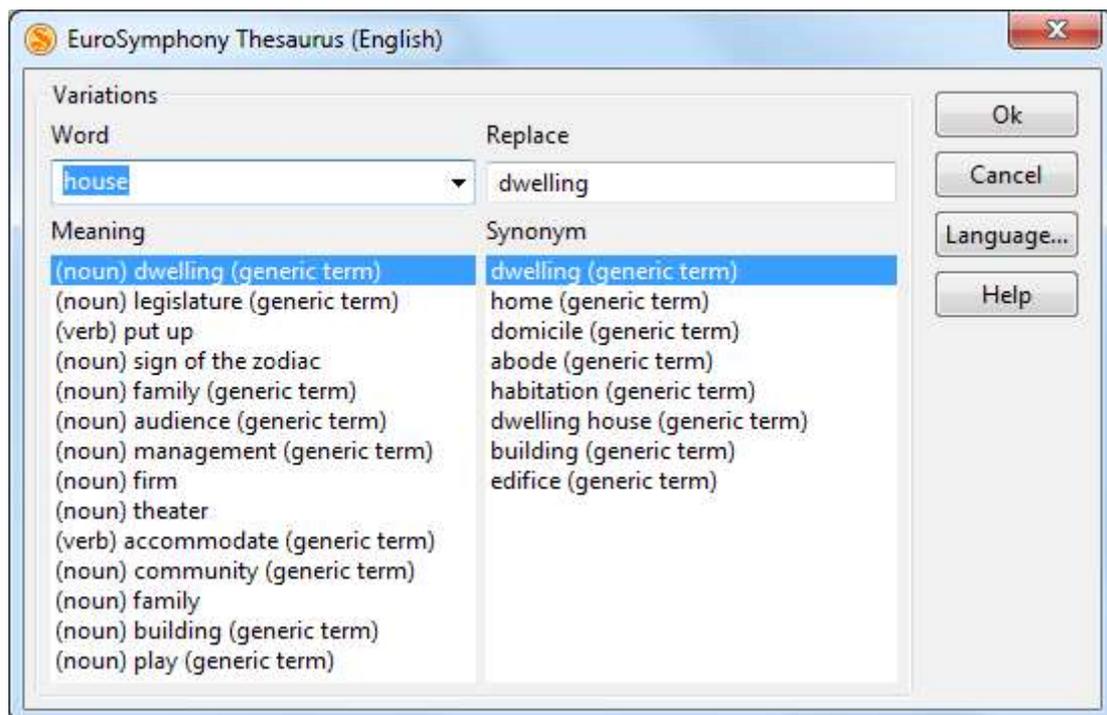

EuroSymphony Thesaurus

Lotus Symphony doesn't contain a built in thesaurus module, so probably users will like our extension not only in Hungarian, but other languages as well.

EuroSymphony Thasaurus is available in Hungarian, English, German, Polish, French, Italian and Spanish languages. The Hungarian database of this thesaurus is provided by the industry-leading Morphologic Ltd. and Morphologic technology is also used to handle inflections. It means that you can check the synonyms of inflected words and replace these words with the properly inflected forms of their synonyms. All of other databases are coming from OpenOffice.org.

An important feature of the Hungarian thesaurus is its ability to properly recognize and manipulate words with suffixes. Mark out a word in your document, then choose **Tools – Language – EuroSymphony Thesaurus**. If you find a good synonym in the list, just choose it with a single click, then press "OK" button and the original word will be changed with your synonym.

EuroSymphony Thesaurus's dialog gives the synonyms in the language of the document. If you want to use another language, just, choose "Language..." button and change this one.
